

Daniel Sias

daniel.sias@gmail.com • (407) 272-1720 • danielsias.dev

Full-Stack Software Engineer with experience building web applications, developer tooling, payment platform integrations, and analytics systems. Comfortable working across Laravel, React, TypeScript, and cloud-based architectures to deliver reliable, maintainable software. Experienced in GitHub-based development workflows, API design, and using AI-assisted development to turn prototypes into production-ready features. Passionate about solving complex technical problems with practical, user-focused solutions.

Technical Skills

Frontend: React • Next.js • TypeScript • Tailwind CSS • HTML/CSS • Responsive Design • API Integration
Backend: Laravel • PHP • Node.js • Express • Python • REST APIs • OAuth • Payment Integrations
Databases: PostgreSQL • MariaDB • MySQL • BigQuery • SQL • Data Modeling • Query Optimization
Cloud & DevOps: AWS • Google Cloud • Microsoft Azure • Docker • CI/CD • GitHub Actions • Linux
Workflow: Git • CI/CD • Pull Requests • Agile/Scrum • AI-Assisted Development • Performance Optimization

Professional Experience

Developer Support Engineer

May 2025 - Current

RocketGate

Develop full-stack applications, internal tooling, and developer resources supporting merchant integrations, engineering workflows, and payment platform operations.

- Built Workflow Intelligence, a Laravel/Vue platform providing engineering teams with visibility into work items, stage history, and development progress.
- Developed transaction reconstruction tools, operational tracking, and AI-assisted knowledge management to accelerate troubleshooting and improve merchant support.
- Modernized developer documentation and support resources, improving integration guidance, reducing ticket response time, and streamlining onboarding for payment platform customers.
- Collaborated across engineering, product, and support teams to investigate complex payment integrations and deliver production-ready solutions using GitHub-based development workflows.
- Designed and implemented internal tooling that reduced manual engineering effort through automation, improved operational visibility, and streamlined day-to-day developer workflows.

Data & Analytics Lead Developer / Data Analyst

Sept 2015 - July 2024

Pearson Online Learning Services

Developed data-driven applications, automation tools, and analytics platforms to improve marketing performance, financial forecasting, and sales operations through full-stack development, API integrations, and workflow automation.

- Built a React/Node analytics platform integrating BigQuery and Salesforce, reducing report generation time by 85% while automating KPI tracking for \$25M+ in annual marketing spend.
- Developed a centralized marketing forecasting platform that replaced manual spreadsheets, saving 20+ hours per month while improving budget planning and reporting accuracy.
- Designed API-driven integrations and marketing automation tools connecting Salesforce, BigQuery, Google Analytics, and advertising platforms to improve campaign tracking, attribution, and reporting.
- Collaborated on the Salesforce migration and BigQuery data warehouse implementation, helping transition legacy reporting systems while maintaining data integrity.
- Partnered with marketing, finance, and engineering stakeholders to translate business requirements into scalable full-stack applications supporting analytics, forecasting, and operational reporting.

Led data-driven SEO initiatives supporting 34 university programs, combining technical SEO, analytics, automation, and experimentation to improve organic growth and lead generation.

- Managed a \$1.3M SEO budget, using data analysis to guide content strategy and improve conversion performance across multiple programs.
- Built real-time dashboards and automation using Tableau, Google Analytics, and API integrations, replacing manual reporting and accelerating decision-making.
- Improved organic search performance through technical SEO, A/B testing, automated keyword monitoring, and conversion funnel optimization.

Founder & Full Stack Developer / Marketing Consultant
Liquid Gravity Engineering

July 2005 - June 2013

Founded and led a marketing technology consultancy, building custom web applications, CRM integrations, automation tools, and conversion-focused solutions for clients across multiple industries.

- Engineered custom ecommerce features, CRM integrations, and marketing automation systems that streamlined customer acquisition and operational workflows.
- Built analytics dashboards, A/B testing frameworks, and performance tracking tools to improve campaign optimization and data-driven decision-making.
- Delivered measurable business results, including a 37% increase in post-purchase conversion rates and 201.2% growth in lead generation without increasing advertising spend.

Project Highlights

Workflow Intelligence: Engineering Workflow & Project Tracking Platform

Developed an AI-assisted workflow management platform for tracking work items, stage transitions, and operational visibility through a modern Laravel/Vue architecture.

Technologies: Laravel • Vue.js • TypeScript • Tailwind CSS • MySQL • Jira API • GitLab API

Key Achievements:

- Built a modern Laravel-based application for managing work items, workflow stages, and operational reporting.
- Leveraged AI-assisted development to rapidly prototype and refine maintainable production applications.
- Designed intuitive interfaces for workflow visualization, history tracking, filtering, and operational analytics.
- Developed with a GitHub pull-request workflow with an emphasis on code quality and iterative delivery.

Nexus: Enterprise Analytics & Marketing Performance Platform

Created a suite of analytics applications that automated reporting, forecasting, SEO analysis, and marketing performance tracking across multiple business functions.

Technologies: Node.js • React.js • BigQuery • PostgreSQL • Express.js

Key Achievements:

- Created real-time dashboards consolidating Salesforce, marketing, and SEO data into a unified reporting platform.
- Automated KPI reporting, reducing manual reporting by 85% while supporting \$25M+ in marketing spend analysis.
- Replaced spreadsheet-driven workflows with scalable web applications, saving 20+ hours per week across teams
- Engineered API integrations and custom reporting tools that enabled faster, data-driven business decisions.

Academic Background

Master of Science in Optics
University of Central Florida

Master of Science in Management
University of Florida

BS in Engineering Physics
Embry-Riddle Aeronautical University
